EDUCATION

Batchelor of Science in Computing

University of "Dzemal Bijedic" Mostar
2012 - 2015

Electrical technician, computer technology and automation

Electrotehnickal highscool Mostar
2008 - 2012

TECHNICAL SKILLS

- Javascript | Typescript
- Angular | React
- NgRx | Redux
- RxJS | React Query
- .NET and SQL | Node.js
- C++ | C#
- Git | GitLab | Github Actions
- Snowflake Data Cloud |
Firebase
- Karma and Jest
- Figma and AdobeXD
- Jira / Trello / Linear

WORK HISTORY

Frontend developer
Freelance

December 2023 - Present

I'm currently working as a Freelancer for a US company (NDA name disclosure) where I mostly do some refactoring, testing, and some additional features. Their web app is helping their customers manage leads and keep track of schedules for home/apartment renters. It's based on React and uses Redux for state management. I already made some great contributions to this neatly organized small company and made some development suggestions that would help us as a team and also improve user experience. One of them was using React query for asynchronous data management, which they gladly approved and are now using.

Frontend developer
3DQR GmbH | Magdeburg

March 2022 - December 2023

I was hired by 3DQR to work, with a small dedicated team of great programmers, on a web app that is used by customers to create and manage AR scene content. Right from the start I got to experience a dynamic work atmosphere and trust between colleagues which reflected in giving me the full responsibility to work on two major features used for creating a collection of AR scenes and managing AR scene media (Media Library). Besides that, I worked on refactoring old code, creating new components (one that I'm proud of, a custom single/multi-select searchable dropdown), different file managing features, and app behaviors for better user experience. Also in collaboration with mobile app developers worked on an analytics feature where I used Unity data exported over Snowflake data cloud service tasks and Node.js endpoint to present per-scene statistics.

Frontend developer
Walkeroo | Sarajevo - Dissolved*

February 2020 - March 2022

Project consisted of building backend and frontend features for an web application. The frontend was designed as a comprehensive dashboard tailored for administrators and store owners, while the backend served not only this frontend but also facilitated communication with a mobile application.,

ACTIVITIES AND AWARDS

- Microsoft Network Conferences
- Agile Software Development Conferences
- Erasmus+ Training Courses
- First place in local EBEC competition in case study competition, and participation on regional competition as well
- An active volunteer in an NGO that focuses on nature preservation and also wrote and Coordinated a Project called "Door to a Healthier Future" that had the goal of creating a recreational zone with a focus on rock climbing as a means for people to get connected to nature and stay healthy.

OTHER

Hobbies and interests: Rock climbing, hiking, reading

Spoken Languages: Bosnian native and English

Through this application, users could accumulate coupons and points from various stores within the network, subsequently redeeming them for discounts on purchases made at other participating stores. Tech stack used for building this great product at the time Angular, RxJS, NgRx, Nebular, .NET Core, PostgreSQL.

Full stack developer
Arethero Group | Mostar

February 2018 – February 2020

Arethero is a digital agency that provides services to other businesses such as web application development, consulting, SEO, and digital marketing. Also, besides directly working on the projects, project management, and task delegation, I was finding new talent and walking them through the hiring process and onboarding. We were primarily using Angular and .Net technologies, I learned a lot working on different projects and how different businesses operate.

Frontend developer
Twistshake BiH | Sarajevo

June 2016 – February 2018

The project consisted of building front-end features for an e-commerce web application. Tech stack Javascript, HTML, CSS, JQuery. Twistshake is a Swedish company that develops baby products. The company was founded in 2014 and has since then delivered products to over 100 countries. The company has a strong focus on design, quality, and functionality.

Fullstack developer
Bosna Bank International | Sarajevo

April 2015 – June 2016

While still in the second year of my bachelor's path, I was recommended by my professors to colleagues in Bosna Bank International to go do an interview and see what comes out of it. I passed all of the stages and quickly found myself working on my first software development job. I quickly had to find a way to balance my studies with the job that I managed to do. Right from the start they "tested" my knowledge a lot and kind of looked at me for some fresh ideas for the internal financing app that they were working on at the time. My primary work was on analytics systems, mostly template report generators and filtering and searching reports. Even though I had a good programming background in C# and .NET (Microsoft technologies) I quickly had to adapt to AngularJS and all of its intricate details. While still used to working alone I had to adapt to using version control systems. In particular, for this job, we used a Team Foundation server (TFS) which we all had to adapt and find a new and productive way to use.

All around worker
Mostar

Up until 2015.

As a youngster worked in all kinds of jobs from fruit picking to construction, but most of my pocket money I would earn by fixing computers for other people, which of course was my favourite because I got to "play" with different components and learned internal workings of a PCs and laptops.
